

U-LAN Quick Start Guide

(Document Version 1.0, [BirdsSoft reserves all right](#))

U-LAN is a easy-use Virtual LAN software, It can help you convert Internet to a LAN. You can use it play LAN games or do all other LAN task around internet.

Server Usage

Precondition:

Before install U-LAN Server, you should make sure you have a public IP address.

Configuration:

1)Map/forward UDP 25000 port to Internet on your router/ADSL device. If your machine is on the Internet, you can skip this step.

If you can't understand Port Mapping/Forwarding, here are some useful links:

<http://portforward.com/routers.htm>

http://en.wikipedia.org/wiki/Port_forwarding

<http://www.portforward.com/help/pfprogression.htm>

2)Create U-LAN account in U-LAN user management

3)Just wait for your clients login

Client Usage
